global periocular solution
by mesoestetic®

specific professional treatment
to fight the signs of aging and fatigue
in the eye contour

mesoestetic®

The eye contour: characteristics and imperfections

Eye contour is a particularly sensitive area that has differentiated anatomical characteristics, which explains why the treatment must be specific:

> Skin is **5 times thinner** than the rest of the face.

> **Lymphatic drainage** is complex and very sensitive to external and internal factors.

> It is a **highly vascular area**, with many vessels and small capillaries.

> **22 underlying periorbital muscles**, in continuous gesticulation, converge.

> **Lipid packing** in the upper and lower part of the eye give support and turgor to tissues and **usually decrease with age**.

Main imperfections

All these characteristics make that eye contour shows multiple imperfections due to external or internal factors, as well as changes caused by the skin aging process:

drooping upper eyelid

The loss of volume of the supraorbital lipid packing and tissue flaccidity cause drooping tissue on the mobile eyelid.

expression lines and wrinkles

'Breaking' lines caused by continuous gesticulation and loss of turgor and elastic capacity of the tissues.

under-eye bags

Caused by water or fat accumulation on the infraorbital area combined with insufficient drainage.

under-eye circles

Colour disorders due to genetic or acquired factors in the infraorbital area, caused by circulatory (blue/violet) or pigmentation problems (brown).

global eyecon

> Professional treatment with global action: it corrects wrinkles, under-eye bags and circles, sagging and pigmentation in the periorcular area.

> Combines multiple therapeutic categories for a more potent, effective action:

Cumulative results, visible from the 1st session

> Programme of 6 sessions: 3 peel sessions (☺) + 3 transepidermal sessions (☐):

global eyecon periorcular peeling

Specific peel for global antiaging, antifatigue and depigmentation treatment of the eye contour.

MAIN INGREDIENTS: Combines azelaic, salicylic, lactic, phytic and citric acid.

global eyecon periorcular solution

Sterile solution combining ingredients with **depigmenting and decongestant** action on microcirculation. Compatible with multiple transdermal vehiculation systems.*

MAIN INGREDIENTS: Combines sweet clover, rutin, glabra extract and phytic acid.

crystal fiber eye mask

Hydrogel mask with specific design for the eye contour. Depigmenting, moisturising, decongestant and antifatigue action.

MAIN INGREDIENTS: Combines tranexamic acid, hyaluronic acid, aloe vera and cucumber extract.

*microneedling, rollers, ultrasound, cavitation, radiofrequency, iontophoresis.

global eyecon

Peel sessions ( + )

Products

oil removing solution
10 ml

global eyecon periocular peeling
4 ml

post-peel neutralizing spray
50 ml

Application protocol

01/ Preparation of the skin

oil removing solution allows to remove the hydrolipidic film to enhance active ingredient penetration, maximising treatment efficacy.

Apply using a gauze over the previously clean, dry skin.

mesoestetic® recommends:

Protect the corners of the eye with **mesolips** before application of **global eyecon periocular peeling**. For greater convenience in application, first apply to half the face and repeat the process.

02/ Application of the peel and removal

Using a cotton bud, spread evenly **global eyecon periocular peeling** according to the following order of application:

1. external periocular area
2. lower eyelid
3. upper eyelid

Apply **3 layers of product**, one over the other, in 'multi-layer' application. The product exposure time is **3 minutes before removing it**.

MAXIMUM EXPOSURE TIME

03/ Neutralisation of the peel

post-peel neutralizing spray is a solution formulated at pH 7.5 - 8.8 to neutralise effectively **global eyecon periocular peeling**.

Spray thoroughly on a cotton pad and slide over the area treated. Leave on for a few minutes and remove the residue with water.

It is usual to feel itching or stinging. These symptoms will disappear after a few seconds.

The **global eyecon** pack contains the product necessary to complete the treatment for 2 patients:

- 1 x **oil removing solution** 10 ml
- 6 x **global eyecon periocular peeling** 4 ml
- 1 x **post-peel neutralizing spray** 50 ml

- 6 x **global eyecon periocular solution** 4 ml
- 1 x sterile **vial-syringe adapter** + 1 x sterile **syringe**
- 6 x **crystal fiber eye mask** 12 ml

Transepidermal sessions (+)

Products

oil removing solution
10 ml

Vial-syringe adapter and sterile syringe
1 un / 1 un

global eyecon periocular solution
4 ml

crystal fiber eye mask
12 ml

Application protocol

01/ Preparation of the skin

Apply the **oil removing solution** using a gauze over the previously clean, dry skin.

It allows to remove the hydrolipidic film to enhance active ingredient penetration, maximising treatment efficacy.

02/ Extraction and application

The **vial-syringe adapter** and the **sterile syringe** are tools to facilitate extraction of the solution and its application.

Remove the vial cap (*Fig. 2.1*) and place the adapter on the neck exerting a slight downward pressure (*Fig. 2.2*). Position the syringe in the adapter adjusting it with a turn of the screw (*Fig 2.3*). Place the bottle upside down and pull the plunger backwards to empty the syringe content (*Fig. 2.4*).

03/ Application and vehiculation

Apply one vial per session and patient. Release small amounts of solution (2 ml per side) over the areas to be treated and vehicle by microneedling.

mesoestetic® recommends:

Deliver the solution by microneedling using **m.pen^{lpro}** at 0.25 mm in depth. Do not use in the part of the mobile eyelid of the eye.

04/ Application of the mask

Apply and adapt the mask so that it is in full contact with the area treated.

Leave on for 10-15 minutes on the skin.

TIME OF APPLICATION

10 - 15 min

Home treatments (🏠 + 🧴)

mesoestetic® recommends the regular use of specific home treatments which allow to enhance and maintain the results obtained after any professional treatment.

> DAILY ANTIAGING TREATMENTS BY INDICATION

energy C eye contour

UNDER-EYE CIRCLES. Energising treatment for the eye contour that prevents and fights the appearance of expression lines and reduces the signs of tiredness.
15 ml

collagen 360° eye contour

WRINKLES AND FLACCIDITY. Antiaging treatment for the eye contour that reduces wrinkles and expression lines and improves turgidity.
15 ml

radiance DNA eye contour

WRINKLES, UNDER-EYE CIRCLES AND BAGS. Global antiaging treatment for the eye contour that corrects wrinkles and reduces under-eye bags and circles.
15 ml

ultimate W+ spot eraser

PIGMENTATION. Depigmentation treatment that acts lightening the skin pigmentation tone in localised areas. Applicator that facilitates local use.
15 ml

> SPECIFIC PHOTOPROTECTION

mesoprotech® sun protective repairing stick

After performing the treatment, application of a specific photoprotector suitable for sensitive areas is particularly required to prevent and avoid pigmentation in case of exposure to sunlight or artificial light sources.
4.5 g

> IN & OUT SOLUTION

mesocaps eye contour recovery

Food supplement with a specific formula combining the antiaging power of resveratrol and hyaluronic acid with detoxifying and regenerating active ingredients, such as primrose oil, silicon or iron. Indicated for persons susceptible to the appearance of under-eye bags and circles, to improve the area blood flow and reduce their appearance.

30 caps (1 at night)

Efficacy results

⦿ Wrinkles and expression lines

⦿ Under-eye circles

⦿ Under-eye bags

⦿ Drooping upper eyelid

global eyecon

Professional treatment programme specific for the eye contour.

Allows to correct multiple eye contour imperfections: wrinkles, under-eye circles, bags and drooping upper eyelid.

Combines several categories for a more potent, effective result.

Supplied in packs containing all necessary products and tools to perform a full programme for two patients.

Cumulative and visible results from the first session.
